To Shareholders of Flaherty & Crumrine Dynamic Preferred and Income Fund (“DFP”):

Fiscal 2015 came to a close on November 30, and in most regards it was another respectable year for preferred stocks. Total return on net asset value (“NAV”)[1] was 2.9% for the fourth fiscal quarter[2], and 7.1% for the full fiscal year. Total return on market price of Fund shares over the same periods were 5.3% and 5.7%, respectively.

The table below shows Fund returns over various measurement periods, and they continue to be very good. The table includes performance of two indices, Barclays U.S. Aggregate and S&P 500, as proxies for bond and stock markets, respectively. While neither is a benchmark for Fund performance, they provide context for returns on broad asset categories.

TOTAL RETURN ON NET ASSET VALUE
FOR PERIODS ENDED NOVEMBER 30, 2015
(Unaudited)

	Actual Returns			Average Annualized Returns
	Three Months	**Six Months**	**One Year**	**Life of Fund(1)**
Flaherty & Crumrine Dynamic Preferred and Income Fund	2.9%	2.2%	7.1%	9.8%
Barclays U.S. Aggregate Index(2)	0.4%	-0.1%	1.0%	2.2%
S&P 500 Index(3)	6.1%	-0.2%	2.7%	12.0%

(1) Since inception on May 29, 2013.
(2) The Barclays U.S. Aggregate Index is an unmanaged index considered representative of the U.S. investment grade, fixed-rate bond market.
(3) The S&P 500 is a capitalization-weighted index of 500 common stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. In addition, NAV performance will vary from market price performance, and you may have a taxable gain or loss when you sell your shares.

Credit markets (including preferreds) had their share of fits and starts in 2015. Monetary policy “liftoff” was a constant debate that kept bond and stock markets on-edge. The Federal Reserve finally did raise short-term rates in December, but it was anticlimactic at best. Sharp declines in commodity prices brought many industries under the microscope, notably energy and metals, as credit metrics began to slip late in the year. Low interest rates, along with a host of mergers and acquisitions, led to a blockbuster year of issuance in corporate-debt securities—in many cases causing leverage ratios to tick higher. These factors led to a widening of credit spreads and sub-par performance in the broader corporate debt market.

[1] Following the methodology required by the Securities and Exchange Commission, total return assumes dividend reinvestment and includes income and principal change, plus the impact of the Fund’s leverage and expenses.
[2] September 1—November 30, 2015

One sector that shined in 2015 was financials. Banks, in particular, bucked the trend of weakening credit metrics. Regulation requiring banks to hold more capital and increased liquidity continued to weigh on earnings. However, having increasing amounts of common equity on the balance sheet is credit enhancing for preferred-securities investors. This credit trend helped bank preferreds perform well during the year, and we believe these regulatory trends are unlikely to reverse anytime soon.

The Fund's energy portfolio, while not large at approximately 7% at year-end, had an outsized negative impact on returns this year. These portfolio holdings are exclusively in pipeline companies—most with very limited direct exposure to oil prices. These companies do, however, have a substantial backlog of projects that will require funding in coming years. Given a sharp drop in equity valuations, companies will increasingly need to rely on debt markets to fund projects. The result has been a dramatic repricing of bonds issued by these companies, as investors demand additional yield for new debt issuance. Preferred securities have weakened in step with debt securities, even though earnings and cash flows should remain relatively healthy. The market has not differentiated much, however, and prices on anything related to energy have moved materially lower.

We have written many times about growth in fixed-to-float preferred securities, noting both benefits (lower duration) and risks (extension).[3] Performance of these securities was mixed throughout the year, with concerns about back-end-reset spreads on some fixed-to-float securities nearing their first-float dates leading to markedly lower prices. Recall that a back-end spread represents an issuer's credit spread at the end of the fixed-rate period. Simply put, if an issuer's credit spread at time of reset is higher than the reset spread, the security will remain outstanding (extend) and trade at a discount to par value.

Much of the fixed-to-float market was issued in a higher interest-rate environment when credit spreads were tighter. From an issuer's perspective, some outstanding fixed-to-float securities are a cheaper source of capital than could be issued today. Persistently low interest rates, along with a widening of credit spreads, have increased the likelihood of extension for many of these securities—causing them to be a drag on performance throughout the year.

As we have mentioned before, it's not all bad news for fixed-to-float securities. A security with very low duration due to a coupon that will adjust higher as short-term rates increase may be just what many investors want over time. There are also fixed-to-float securities with more current (higher) back-end-reset spreads—which have been among the market's top performers.

One of the best places to be invested in 2015 was in preferreds that are listed on an exchange, typically in $25-par denominations (many of which have fixed-rate coupons). This market segment is the sole focus of preferred ETFs, which have had a disproportionate market impact for many years. ETFs have increased considerably in size as investors have piled on for perceived easy access to preferred securities, and this demand caused prices to move materially higher. Many listed preferred securities have some unflattering characteristics, but ETFs have been large and indiscriminate buyers. Consequently, 2015 returns were excellent, although we view their longer-term prospects less favorably at current prices.

[3] All things being equal, lower-duration securities will not fall in price as much as higher-duration securities would when interest rates rise.

Dividends paid to Fund shareholders have been a bright spot for many years, and 2015 was no exception. Portfolio yields have held up better than expected in this low-rate environment, and leverage costs have remained extremely low. As a result, the Fund's dividend rate has been among the highest offered by closed-end preferred funds. Leverage costs are likely to move higher over 2016, although pace is uncertain. Dividend rates have been set with this in mind and include a bit of cushion against higher short-term rates, but sustained Fed tightening would pressure the Fund's distributable income. We encourage you to read the discussion topic that follows on monthly distributions to shareholders.

Markets are entering a new phase with "liftoff" having occurred in December, but many positive factors supporting the preferred market will persist over the near-term. The path to higher short-term rates is likely to be gradual as the economy shows no signs of overheating and monetary policy around the globe remains exceptionally easy. Approximately 90% of the preferred market is comprised of issuers from "financial" industries, including banks, insurance, finance, and REITs. While not a homogeneous group, broadly speaking we believe these sectors have stronger credit metrics than many other non-financial sectors. A search for yield continues, and preferred securities offer higher yields than most other fixed-income securities—especially for investors able to take advantage of lower tax rates on qualified dividend income.

We close this letter by acknowledging the retirement of a long-time portfolio manager of the Fund, and a co-founder of Flaherty & Crumrine, Don Crumrine. Don retired as a portfolio manager and from Flaherty & Crumrine on December 31, 2015. Don's contributions to the Fund and our firm are immeasurable, but most importantly, he has been instrumental in shaping the culture of the firm so that it can continue to deliver strong investment performance for many years to come. We thank Don for his 33 years of service and lasting contributions, and we wish him all the best in retirement.

In the discussion topics that follow, we dig deeper into subjects mentioned here as well as others of interest to shareholders. In addition, we encourage you to visit the Fund's website, www.preferredincome.com for timely and important information.

The Flaherty & Crumrine Portfolio Management Team

January 1, 2016

DISCUSSION TOPICS
(Unaudited)

The Fund's Portfolio Results and Components of Total Return on NAV

The table below presents a breakdown of the components that comprise the Fund's total return on NAV over both the recent six months and over the Fund's fiscal year. These components include: (a) the total return on the Fund's portfolio of securities; (b) any returns from hedging the portfolio against significant increases in long-term interest rates; (c) the impact of utilizing leverage to enhance returns to shareholders; and (d) the Fund's operating expenses. When all of these components are added together, they comprise the total return on NAV.

Components of DFP's Total Return on NAV
for Periods Ended November 30, 2015

	Six Months[1]	One Year
Total Return on Unleveraged Securities Portfolio (including principal change and income)	1.8%	5.5%
Return from Interest Rate Hedging Strategy	N/A	N/A
Impact of Leverage (including leverage expense)	0.9%	2.7%
Expenses (excluding leverage expense)	-0.5%	-1.1%
Total Return on NAV	**2.2%**	**7.1%**

[1]Actual, not annualized

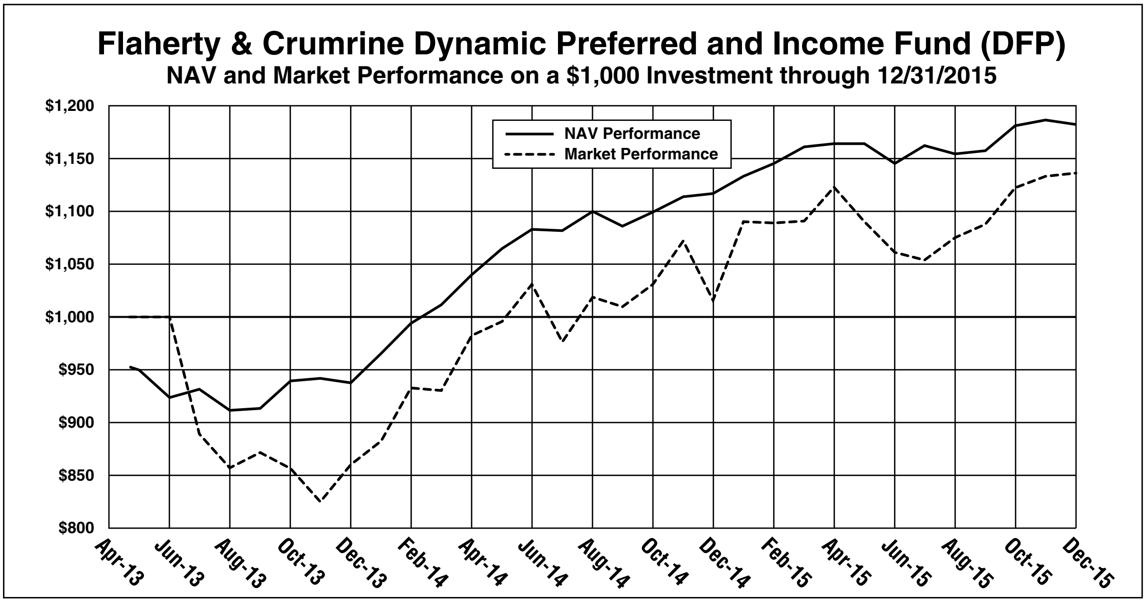
For the six month and one year periods ended November 30, 2015 the BofA Merrill Lynch 8% Constrained Core West Preferred & Jr Subordinated Securities Index℠ (P8JC)[1] returned 2.3% and 5.7%, respectively. This index reflects the various segments of the preferred securities market constituting the Fund's primary focus. Since this index return excludes all expenses and the impact of leverage, it compares most directly to the top line in the Fund's performance table above (Total Return on Unleveraged Securities Portfolio).

Total Return on Market Price of Fund Shares

While our focus is primarily on managing the Fund's investment portfolio, our shareholders' actual return is comprised of the Fund's monthly dividend payments *plus* changes in the *market price* of Fund shares. During the twelve-month period ending November 30, 2015, total return on market price of Fund shares was 5.7%.

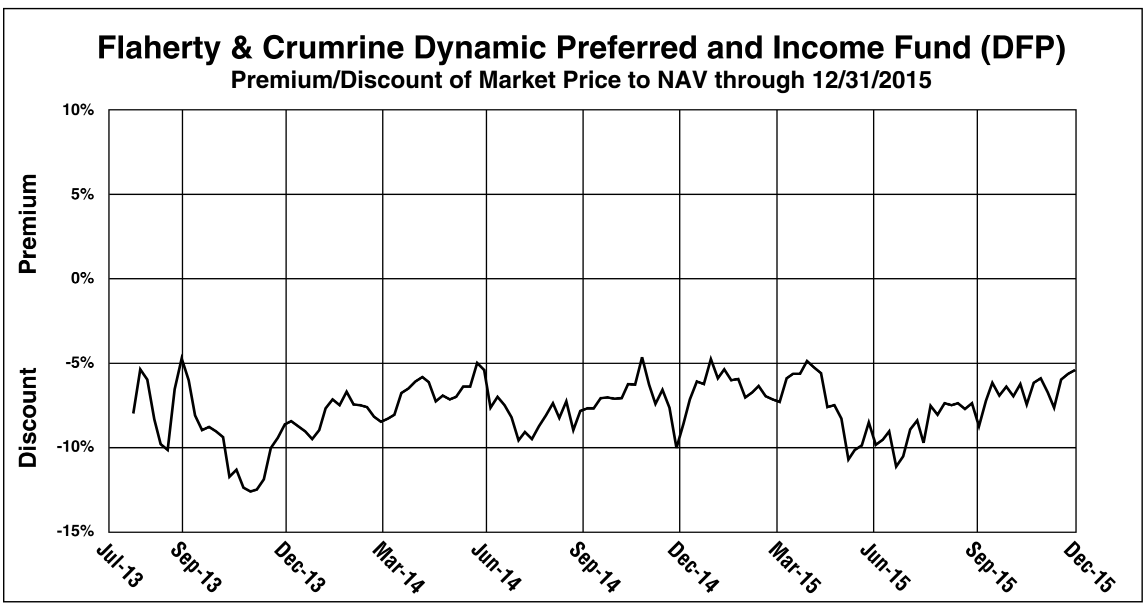
Historically, the preferred securities market has experienced price volatility consistent with those of other fixed-income securities. However, since mid-2007 it has become clear that preferred-security valuations, including both the Fund's NAV and the market price of its shares, can move dramatically when there is volatility in financial markets. The chart on page 5 contrasts the relative stability of the Fund's earlier period with the more recent volatility in both its NAV and market price. Many fixed-income asset classes experienced increased volatility over this period.

[1] The BofA Merrill Lynch 8% Constrained Core West Preferred & Jr Subordinated Securities Index℠ (P8JC) includes U.S. dollar-denominated investment-grade or below investment-grade, fixed rate, floating rate or fixed-to-floating rate, retail or institutionally structured preferred securities of U.S. and foreign issuers with issuer concentration capped at 8%. All index returns include interest and dividend income, and, unlike the Fund's returns, are unmanaged and do not reflect any expenses.



In a more perfect world, the market price of Fund shares and its NAV, as shown in the above chart, would track closely. If so, any premium or discount, calculated as the difference between these two inputs and expressed as a percentage, would remain relatively close to zero. However, as can be seen in the chart below, this often has not been the case.

Although divergence between NAV and market price of a closed-end fund is generally driven by supply/demand imbalances affecting its market price, we can only speculate about why the relationship between the Fund's market price and NAV hasn't been closer.



Based on a closing price of $22.90 on December 31st and assuming its current monthly distribution of $0.16 does not change, the current annualized yield on market price of Fund shares is 8.4%. In our opinion, this distribution rate measures up favorably with most comparable fixed-income investment opportunities. Of course, there can be no guarantee that the Fund's dividend will not change based on market conditions.

Economic and Interest Rate Recap and Outlook

U.S. inflation-adjusted Gross Domestic Product (real GDP) probably grew about 2.2% in 2015, slower than its 2.5% pace in 2014 and below most forecasts (including ours) entering the year. Most of the "miss" in 2015 came in the first quarter, when cold and snow across much of the nation held growth to just 0.6%; it appears to have averaged about 2.7% thereafter, about in-line with earlier full-year forecasts. Private domestic final sales expanded by more than 3%, led by solid gains in personal consumption and residential investment. Business investment and government spending were a little weaker than expected, but a wider trade deficit was 2015's biggest economic headwind. Although U.S. economic growth was only modest in 2015, it was better than that of most other developed nations, and the U.S. dollar rose sharply, curbing exports.

We expect slightly firmer real GDP growth of about 2.5% in 2016. Personal consumption and residential investment should remain strong in 2016 as rising employment and gradually-accelerating wages boost income. In turn, that should prompt higher business investment as the year progresses. Trade probably will remain a headwind, however, and government spending gains are likely to lag as well.

Inflation remained at or below 0.5% in 2015 due to sharply lower energy prices. Recent warm winter weather in the U.S., higher oil output from the Middle East, and rising energy efficiency may push energy prices still lower over the near term, although a sharp drop in exploration activity should put a floor under prices at some point. Core U.S. inflation (i.e., excluding food and energy) edged upward in 2015 and now ranges between 1.2% (core personal consumption expenditure deflator) and 2.0% (core consumer price index).

As a disinflationary impulse from lower energy prices wanes, overall inflation should move up toward core inflation. And because energy prices dropped especially sharply in late 2014 and early 2015, headline inflation could rise fairly quickly in 2016 as those negative months roll out of year-over-year inflation calculations. We're not inflation hawks, but we do expect inflation to pick up in 2016.

With economic growth modest and inflation low in 2015, long-term interest rates finished the year about where they began. Ten- and 30-year Treasury rates rose by 10 basis points (bp) to 2.27% and 26 bp to 3.01%, respectively. Short-term rates spent almost the whole year hovering near zero, finally rising by 25 bp in December when the Federal Open Market Committee (FOMC) ended seven years of zero-interest-rate policy.

We expect the FOMC to hike the fed funds rate by 25 bp per quarter until it reaches 2% or so, with more gradual moves thereafter, bringing rates back to 3-3.5%. We consider this the most likely path of rates, but risks are skewed toward less Fed tightening. Global economic growth is still slow, inflation is muted and most major central banks are easing monetary policy. Too-rapid Fed tightening could cause the U.S. dollar to soar, damaging exports and blunting inflation. Accordingly, markets discount somewhat less tightening than this "most likely" path of rates. We look for long-term Treasury rates to move modestly higher in 2016, but we do not expect another episode like 2013's "taper tantrum," when long-term interest rates shot up by more than 100 bp in short order.

Credit conditions were mixed in 2015. On a positive note, U.S. financial companies (especially banks) continued to build capital and liquidity, and loan defaults and delinquencies fell further. European banks, while not as far along in their recoveries as their U.S. counterparts, are also gradually rebuilding their balance sheets and looking more attractive. In contrast, nonfinancial companies increased leverage in 2015, and their credit metrics began to deteriorate, albeit from very strong levels in most cases. Looking ahead, we think economic and credit conditions should benefit preferred securities again in 2016. Although long-term U.S. interest rates are likely to rise modestly, spreads on preferred securities are wide and should absorb at least a portion of any rate increase. Financial issuers, which make up most of the preferred securities market, should benefit from gradual Fed tightening and improving credit profiles. We believe prospective returns on preferred securities remain attractive for long-term investors (that is, those within an investment horizon of at least 3-5 years).

Implications of Fed Tightening on Dividends and Investments

In December, the FOMC raised its target for the federal funds rate by 25 bp to 0.25-0.50% after seven years of near-zero interest rates. FOMC members project additional rate hikes over coming years: 100 bp in 2016, 100 bp in 2017 and another 100 bp or so thereafter, bringing the fed funds rate to about 3.5% over a long horizon. Markets currently price in less tightening: 75 bp in 2016, 50 bp in 2017 and a long-run rate of about 3%. Markets expect a slower-and-lower period of tightening than does the Fed. Our own forecasts are in-between.

What will higher short-term rates mean for the Fund? Most directly, cost of the Fund's floating-rate leverage will increase, while income on most of the Fund's investments will hold about steady. Thus, higher leverage cost will reduce distributable income over the short run. That does not necessarily mean that *the Fund's dividend* will fall immediately. We have anticipated rate hikes for some time and set the current dividend rate in light of that. However, higher leverage cost reduces income and will eventually lead to reduced Fund dividends unless it is offset by higher portfolio income. Higher rates could boost portfolio income over time as proceeds of called securities are reinvested (and some securities switch from fixed- to floating-rate), but it may take some time to adjust, and some coupons could float down rather than up. Distributable income is likely to fall over the next couple of years if rates rise as expected.

More positively, higher short-term rates should be associated with a stronger economy, which, in turn, should improve credit performance and lead to narrower yield spreads. This should be particularly true for financial institutions. Nearly all banks are "asset sensitive," meaning their assets re-price more quickly than their liabilities. Banks' net interest margins should expand as rates increase, improving profitability and allowing banks to build capital and reserves more quickly. Yield spreads on preferred securities are wide by historical standards and have ample room to contract, at least partly offsetting higher benchmark interest rates.

We have long said that a distribution yield of roughly 8% in a world of near-zero interest rates was bound to come to an end eventually. It has lasted longer than we and most other market participants expected. While that halcyon period may be coming to a close, we believe preferred securities still offer an attractive combination of high yield, good credit quality and tax-advantaged income.

Monthly Distributions to Fund Shareholders

When it comes to projecting income available to shareholders in future years, the elephant in the room is the expected cost of leverage. Use of leverage is an important part of the Fund's strategy for producing high current income, and we could not produce the Fund's current level of income without it. Leverage costs, which for the Fund are currently 3-month LIBOR + 0.75%, reset quarterly, remained low throughout 2015. We are, however, another year into economic recovery in the United States and the Fed raised short-term rates in December for the first time in seven years.

Looking into 2016 and beyond, with potentially higher leverage costs, there are two questions that shareholders might ask.

If you expect the cost of leverage to increase, why not remove (or at least reduce) leverage from the Fund?

The answer is twofold. First, as shown for this past fiscal year in the first discussion topic above, so long as the cost of leverage is below income earned on the portfolio—which has almost always been the case—income available to shareholders will be higher with leverage than it would be without leverage. Second, following the same logic, removing or substantially reducing leverage today would result in a material reduction in the current dividend rate, given current wide spreads between yields on preferred securities and cost of leverage. So even if leverage costs increase, benefits to distributable income over time can still be substantial as long as leverage costs do not exceed portfolio yield.

If you think short-term rates are going to increase, why don't you continue to hedge the cost of leverage?

In general, hedging is done for two reasons: first, to reduce absolute exposure to a particular risk; and second, to reduce volatility associated with a particular risk. When considering a hedge against a rise in short-term rates, one has to weigh cost versus benefit. If we knew exactly when rates would rise and by how much, then we could evaluate the explicit costs and determine if it would be a winning trade.

Since we don't know the exact timing or magnitude of higher short-term interest rates, a hedge is really another investment decision—one in which we would be betting that the cost of a hedge now (in the form of higher leverage costs today) will be lower than the actual cost of leverage (unhedged) over the hedge's timeframe. In other words, the Fund's distributable income would be lower today if we were to hedge the cost of leverage very far into the future. This is because today's upward-sloping yield curve means the market already expects rates in the future to be higher, so that expected cost is reflected in hedging cost today.

We acknowledge this is complicated, but to simplify: hedging the cost of leverage today would result in lower income today—and may or may not result in improved return (relative to no hedge) in the future. This is because hedging today costs money.

We are not opposed to hedging leverage costs in the right context—for example, we did initially hedge the Fund's cost of leverage when we launched in 2013 because we wanted to offer investors a relatively stable initial distribution rate. However, we acknowledge that a hedge is a bet on the timing and magnitude of rate increases relative to the market's pricing of these risks. There are times when the market's expectations of future rates make this a worthwhile bet, or when risk reduction offered by hedging is particularly valuable, but we don't feel this is true today. Funds that hedged over the past couple years missed out on quite a bit of distributable income without providing protection until very recently, since short-term interest rates didn't move higher until December 2015.

We would like our shareholders to understand that we are not currently hedging the cost of leverage, and are unlikely to do so unless the market's expectations (and, therefore, hedging costs) change. As a result, shareholders are receiving more income today (and have received more over the last several years) in exchange for potentially lower income and returns in the future. Given the current cost of hedging, we have so far decided it is best to take short-term rates as they come.

Federal Tax Advantages of 2015 Calendar Year Distributions

In calendar year 2015, approximately 77.3% of distributions made by the Fund was eligible for treatment as qualified dividend income, or QDI. For taxpayers in the 15% marginal tax bracket, QDI is taxed by the federal government at 0% instead of an individual's ordinary income tax rate; for taxpayers in the 25%-35% marginal tax brackets, QDI is taxed at 15%; and for taxpayers in the 39.6% marginal tax bracket, QDI is taxed at 20%.

For an individual in the 28% marginal tax bracket, this means that the Fund's total distributions will only be taxed at a blended 18.0% rate versus the 28% rate which would apply to distributions by a fund investing in traditional corporate bonds. This tax advantage means that, all other things being equal, such an individual who held 100 shares of Common Stock of the Fund for the calendar year would have had to receive approximately $218.79 in distributions from a fully-taxable bond fund to net the same after-tax amount as the $192 in distributions paid by the Fund.

For detailed information about tax treatment of particular distributions received from the Fund, please see the Form 1099 you receive from either the Fund or your broker.

Corporate shareholders also receive a federal tax benefit from the 40.4% distributions that were eligible for the inter-corporate dividends received deduction, or DRD.

It is important to remember that composition of the portfolio and income distributions can change from one year to the next, and that the QDI or DRD portions of 2016's distributions may not be the same (or even similar) to 2015.

Contingent Capital Securities

Some debt and traditional and hybrid preferred securities include “loss absorption” provisions that make the securities more like equity. These securities are generally referred to as contingent capital securities, or “CoCos.” CoCos are typically issued by financial companies, such as banks, in order to be a source of capital in a time of crisis.

In one type of a CoCo, the security has loss absorption characteristics whereby the liquidation value of the security may be written down to below original principal amount (even to zero) under certain circumstances. This may occur, for instance, in the event that business losses have eroded capital to a substantial extent. Such securities may, but are not required to, provide for circumstances under which liquidation value may be adjusted back up, such as an improvement in capitalization and/or earnings.

Another type of a CoCo provides for mandatory conversion of the security into common shares of the issuer under certain circumstances. A mandatory conversion might result, for instance, from the issuer’s failure to maintain a capital minimum. In addition, some Cocos provide for an automatic write-down if the price of the common stock is below the conversion price on the conversion date.

An automatic write-down or conversion event is typically triggered by a reduction in the capital level of the issuer, but may also be triggered by regulatory actions (e.g., a change in capital requirements) or by other factors.

Risks of Investing in Contingent Capital Securities

CoCo’s which are subject to an automatic write-down (i.e., automatic write-down of the original principal amount, potentially to zero, and cancellation of the securities) under certain circumstances could result in the Fund losing a portion or all of its investment in such securities. In addition, the Fund may not have any rights with respect to repayment of the principal amount of the securities that have not become due or the payment of interest or dividends on such securities for any period from (and including) the interest or dividend payment date falling immediately prior to the occurrence of such automatic write-down. An automatic write-down could also result in a reduced income rate if the dividend or interest payment is based on the security’s written-down value. Finally, since the write-down would occur automatically, holders would not be able to protect the value of the security through the bankruptcy process.

If a CoCo provides for mandatory conversion of the security into common shares of the issuer under certain circumstances and such conversion event occurs, the Fund could experience a reduced income rate, potentially to zero, as a result of the issuer’s common shares not paying a dividend. In addition, a conversion event would likely be the result of or related to the deterioration of the issuer’s financial condition (e.g., a decrease in the issuer’s regulatory capital ratio) and status as a going concern, so the market price of the issuer’s common shares received by the Fund will have likely declined, perhaps substantially, and may continue to decline, which may adversely affect the Fund’s NAV. Further, the issuer’s common shares would be subordinate to the issuer’s other security classes and therefore worsen the Fund’s standing in a bankruptcy proceeding.

It will often be difficult to predict when, if at all, an automatic write-down or conversion event will occur. Accordingly, trading behavior of CoCos may not follow trading behavior of other types of debt and preferred securities. Any indication that an automatic write-down or conversion event may occur can be expected to have a material adverse effect on the market price of a CoCo. CoCos are a relatively new form of security and the full effects of an automatic write-down or conversion event have not been experienced broadly in the marketplace. An automatic write-down or conversion event may be unpredictable and the potential effects of such event on the Fund's yield, NAV and/or market price would likely be adverse, perhaps materially so. As of November 30, 2015, less than 2% of the Fund's assets were invested in CoCos. The Fund is not limited in the extent to which it can invest in CoCos.

FINANCIAL HIGHLIGHTS

For a Common Stock share outstanding throughout each period

Contained below is per share operating performance data, total investment returns, ratios to average net assets and other supplemental data. This information has been derived from information provided in the financial statements and market price data for the Fund's shares.

	Year Ended November 30, 2015	Year Ended November 30, 2014	For the period from May 29, 2013[1] through November 30, 2013
PER SHARE OPERATING PERFORMANCE:			
Net asset value, beginning of period	$ 24.80	$ 22.75	$ 23.83[2]
INVESTMENT OPERATIONS:			
Net investment income	1.79	1.76	0.72
Net realized and unrealized gain/(loss) on investments	(0.24)	2.26	(1.02)
Total from investment operations	1.55	4.02	(0.30)
DISTRIBUTIONS TO COMMON STOCK SHAREHOLDERS:			
From net investment income	(1.92)	(1.97)	(0.78)
Total distributions to Common Stock Shareholders	(1.92)	(1.97)	(0.78)
Net asset value, end of period	$ 24.43	$ 24.80	$ 22.75
Market value, end of period	$ 22.99	$ 23.65	$ 19.89
Total investment return based on net asset value*	7.07%	19.05%	(0.93%)[3]***
Total investment return based on market value*	5.65%	29.86%	(17.44%)[3]***
RATIOS TO AVERAGE NET ASSETS AVAILABLE TO COMMON STOCK SHAREHOLDERS:			
Total net assets, end of period (in 000's)	$467,911	$475,163	$435,749
Operating expenses including interest expense[4]	1.68%	1.67%	1.47%**
Operating expenses excluding interest expense	1.08%	1.09%	1.06%**
Net investment income†	7.25%	7.30%	6.29%**
SUPPLEMENTAL DATA:††			
Portfolio turnover rate	16%	31%	10%***
Total managed assets, end of period (in 000's)	$709,211	$710,663	$656,749
Ratio of operating expenses including interest expense[4] to total managed assets	1.12%	1.12%	1.07%**
Ratio of operating expenses excluding interest expense to total managed assets	0.72%	0.73%	0.77%**

* Assumes reinvestment of distributions at the price obtained by the Fund's Dividend Reinvestment and Cash Purchase Plan.

** Annualized.

*** Not Annualized.

† The net investment income ratios reflect income net of operating expenses, including interest expense.

†† Information presented under heading Supplemental Data includes loan principal balance.

(1) Commencement of operations.

(2) Net asset value at beginning of period reflects the deduction of the sales load of $1.125 per share and offering costs of $0.05 per share paid by the shareholder from the $25.00 offering price.

(3) Total return on net asset value is calculated assuming a purchase at the offering price of $25.00 on the inception date of trading (May 29, 2013) less the sales load of $1.125 and offering costs of $0.05 and the ending net asset value per share. Total return on market value is calculated assuming a purchase at the offering price of $25.00 on the inception date of trading (May 29, 2013) and the sale at the current market price on the last day of the period. Total return on net asset value and total return on market value are not computed on an annualized basis.

(4) See Note 8.

The accompanying notes are an integral part of the financial statements.

(1) Whenever the net asset value per share of the Fund's Common Stock is less than or equal to the market price per share on the reinvestment date, new shares issued will be valued at the higher of net asset value or 95% of the then current market price. Otherwise, the reinvestment shares of Common Stock will be purchased in the open market.

Senior Securities

	11/30/2015	11/30/2014	11/30/2013
Total Debt Outstanding, End of Period (000s)[1]	$241,300	$235,500	$221,000
Asset Coverage per $1,000 of Debt[2]	2,939	3,018	2,972

(1) See Note 8.

(2) Calculated by subtracting the Fund's total liabilities (excluding the loan) from the Fund's total assets and dividing that amount by the loan outstanding in 000's.

1. Organization

Flaherty & Crumrine Dynamic Preferred and Income Fund Incorporated (the "Fund") was incorporated as a Maryland corporation on October 10, 2012, and commenced operations on May 29, 2013 as a non-diversified, closed-end management investment company under the Investment Company Act of 1940, as amended (the "1940 Act"). The Fund's investment objective is to seek total return, with an emphasis on high current income.

2. Significant Accounting Policies

The following is a summary of significant accounting policies consistently followed by the Fund in the preparation of its financial statements. The preparation of the financial statements is in conformity with U.S. generally accepted accounting principles ("U.S. GAAP") and requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities in the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates.

Portfolio valuation: The net asset value of the Fund's Common Stock is determined by the Fund's Administrator daily in accordance with the policies and procedures approved by the Board of Directors of the Fund. It is determined by dividing the value of the Fund's net assets available to Common Stock by the number of shares of Common Stock outstanding. The value of the Fund's net assets available to Common Stock is deemed to equal the value of the Fund's total assets less (i) the Fund's liabilities and (ii) the aggregate liquidation value of any outstanding preferred stock.

The Fund's preferred and debt securities are valued on the basis of current market quotations provided by independent pricing services or dealers approved by the Board of Directors of the Fund. Each quotation is based on the mean of the bid and asked prices of a security. In determining the value of a particular preferred or debt security, a pricing service or dealer may use information with respect to transactions in such investments, quotations, market transactions in comparable investments, various relationships observed in the market between investments, and/or calculated yield measures based on valuation technology commonly employed in the market for such investments. Common stocks that are traded on stock exchanges are valued at the last sale price or official close price on the exchange, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available mean price. Futures contracts and option contracts on futures contracts are valued on the basis of the settlement price for such contracts on the primary exchange on which they trade. Investments in over-the-counter derivative instruments, such as interest rate swaps and options thereon ("swaptions"), are valued using prices supplied by a pricing service, or if such prices are unavailable, prices provided by a single broker or dealer that is not the counterparty or, if no such prices are available, at a price at which the counterparty to the contract would repurchase the instrument or terminate the contract. Investments for which market quotations are not readily available or for which management determines that the prices are not reflective of current market conditions are valued at fair value as determined in good faith by or under the direction of the Board of Directors of the Fund, including reference to valuations of other securities which are comparable in quality, maturity and type.

Investments in money market instruments and all debt and preferred securities which mature in 60 days or less are valued at amortized cost. Investments in money market funds are valued at the net asset value of such funds.

Fair Value Measurements: The Fund has analyzed all existing investments to determine the significance and character of all inputs to their fair value determination. The levels of fair value inputs used to measure the Fund's investments are characterized into a fair value hierarchy. Where inputs for an asset or liability fall into more than one level in the fair value hierarchy, the investment is classified in its entirety based on the lowest level input that is significant to that investment's valuation. The three levels of the fair value hierarchy are described below:

- Level 1 – quoted prices in active markets for identical securities
- Level 2 – other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. Transfers in and out of levels are recognized at market value at the end of the period.

A summary of the inputs used to value the Fund's investments as of November 30, 2015 is as follows:

	Total Value at November 30, 2015	Level 1 Quoted Price	Level 2 Significant Observable Inputs	Level 3 Significant Unobservable Inputs
Preferred Securities				
Banking	$365,044,567	$308,017,999	$ 57,026,568	$—
Financial Services	8,979,894	8,979,894	—	—
Insurance	194,648,557	117,917,998	76,730,559	—
Utilities	19,029,378	10,119,148	8,910,230	—
Energy	46,632,626	25,349,356	21,283,270	—
Real Estate Investment Trust (REIT)	31,229,876	31,229,876	—	—

Communication	1,615,550	1,615,550	—	—
Money Market Fund	12,296,148	12,296,148	—	—
Total Investments	$702,799,496	$527,630,369	$175,169,127	$—

During the reporting period, securities with an aggregate market value of $37,280,093 were transferred into Level 2 from Level 1. The securities were transferred due to a decrease in the quantity and quality of information related to trading activity or broker quotes for these securities. During the reporting period, there were no transfers into Level 1 from Level 2. During the reporting period, there were no transfers into or out of Level 3.

The fair values of the Fund's investments are generally based on market information and quotes received from brokers or independent pricing services that are approved by the Board of Directors and are unaffiliated with the Adviser. To assess the continuing appropriateness of security valuations, management, in consultation with the Adviser, regularly compares current prices to prior prices, prices across comparable securities, actual sale prices for securities in the Fund's portfolio, and market information obtained by the Adviser as a function of being an active market participant.

Securities with quotes that are based on actual trades or actionable bids and offers with a sufficient level of activity on or near the measurement date are classified as Level 1. Securities that are priced using quotes derived from implied values, indicative bids and offers, or a limited number of actual trades—or the same information for securities that are similar in many respects to those being valued—are classified as Level 2. If market information is not available for securities being valued, or materially-comparable securities, then those securities are classified as Level 3. In considering market information, management evaluates changes in liquidity, willingness of a broker to execute at the quoted price, the depth and consistency of prices from pricing services, and the existence of observable trades in the market.

Securities transactions and investment income: Securities transactions are recorded as of the trade date. Realized gains and losses from securities sold are recorded on the specific identified cost basis. Dividend income is recorded on ex-dividend dates. Interest income is recorded on the accrual basis. The Fund also amortizes premiums and accretes discounts on fixed income securities using the effective yield method.

Options: Purchases of options are recorded as an investment, the value of which is marked-to-market at each valuation date. When the Fund enters into a closing sale transaction, the Fund will record a gain or loss depending on the difference between the purchase and sale price.

When the Fund writes an option, an amount equal to the premium received by the Fund is recorded as a liability, the value of which is marked-to-market at each valuation date. When a written option expires, the Fund realizes a gain equal to the amount of the premium originally received. When the Fund enters into a closing purchase transaction, the Fund realizes a gain (or loss if the cost of the closing purchase transaction exceeds the premium received when the option was written) without regard to any unrealized gain or loss on the underlying security, and the liability related to such option is eliminated. When a call option is exercised, the Fund realizes a gain or loss from the sale of the underlying security and the proceeds from such sale are increased by the amount of the premium originally received. When a put option is exercised, the amount of the premium originally received will reduce the cost of the security which the Fund purchased upon exercise.

Repurchase agreements: The Fund may engage in repurchase agreement transactions. The Adviser reviews and approves the eligibility of the banks and dealers with which the Fund may enter into repurchase agreement transactions. The value of the collateral underlying such transactions must be at least equal at all times to the total amount of the repurchase obligations, including interest. The Fund maintains possession of the collateral through its custodian and, in the event of counterparty default, the Fund has the right to use the collateral to offset losses incurred. There is the possibility of loss to the Fund in the event the Fund is delayed or prevented from exercising its rights to dispose of the collateral securities.

Federal income taxes: The Fund intends to continue to qualify as a regulated investment company by complying with the requirements under subchapter M of the Internal Revenue Code of 1986, as amended, (the "Code") applicable to regulated investment companies and intends to distribute substantially all of its taxable net investment income to its shareholders. Therefore, no federal income tax provision is required.

Management has analyzed the Fund's tax positions taken on federal income tax returns for all open tax years (November 30, 2015, 2014 and 2013), and has concluded that no provision for federal income tax is required in the Fund's financial statements. The Fund's major tax jurisdictions are federal and the State of California. The Fund's federal and state income and federal excise tax returns for tax years for which the applicable statutes of limitations have not expired are subject to examination by the Internal Revenue Service and state departments of revenue.

Dividends and distributions to shareholders: The Fund expects to declare dividends on a monthly basis to holders of Common Stock ("Shareholders"). Distributions to Shareholders are recorded on the ex-dividend date. Any net realized short-term capital gains will be distributed to Shareholders at least annually. Any net realized long-term capital gains may be distributed to Shareholders at least annually or may be retained by the Fund as determined by the Fund's Board of Directors. Capital gains retained by the Fund are subject to tax at the capital gains corporate tax rate. Subject to the Fund qualifying as a regulated investment company, any taxes paid by the Fund on such net realized long-term capital gains may be used by the Fund's Shareholders as a credit against their own tax liabilities. The Fund may pay distributions in excess of the Fund's net investment company taxable income and this excess would be a tax-free return of capital distributed from the Fund's assets.

Income and capital gain distributions are determined and characterized in accordance with income tax regulations which may differ from U.S. GAAP. These differences are primarily due to (1) differing treatments of income and gains on various investment securities held by the Fund, including timing differences, (2) the attribution of expenses against certain components of taxable investment income, and (3) federal regulations requiring proportionate allocation of income and gains to all classes of shareholders.

Distributions from net realized gains for book purposes may include short-term capital gains, which are included as ordinary income for tax purposes, and may exclude amortization of premium and discount on certain fixed income securities, which are not reflected in ordinary income for tax purposes. The tax character of distributions paid during 2015 and 2014 were as follows:

	Distributions paid in fiscal year 2015		Distributions paid in fiscal year 2014	
	Ordinary Income	**Long-Term Capital Gains**	**Ordinary Income**	**Long-Term Capital Gains**
Common Stock	$36,781,021	$0	$37,777,174	$0

As of November 30, 2015, the components of distributable earnings (i.e., ordinary income and capital gain/loss) available to Shareholders, on a tax basis, were as follows:

Capital (Loss) Carryforward	Undistributed Ordinary Income	Undistributed Long-Term Gain	Net Unrealized Appreciation/(Depreciation)
$(573,668)	$2,008,541	$0	$9,939,901

The composition of the Fund's accumulated realized capital losses is indicated below. These losses may be carried forward and offset against future capital gains through the dates listed below. During the year ended November 30, 2015, the Fund utilized $142,279 of capital losses.

No Expiration Short Term	No Expiration Long Term	Total
$161,590	$412,078	$573,668

Reclassification of accounts: During the year ended November 30, 2015, reclassifications were made in the Fund's capital accounts to report these balances on a tax basis, excluding temporary differences, as of November 30, 2015. Additional adjustments may be required in subsequent reporting periods. These reclassifications have no impact on the net asset value of the Fund. The calculation of net investment income per share in the financial highlights excludes these adjustments. Below are the reclassifications:

Paid-in Capital	Undistributed Net Investment Income	Accumulated Net Realized Gain on Investments
$(71,574)	$3,663,043	$(3,591,469)

Excise tax: The Code imposes a 4% nondeductible excise tax on the Fund to the extent the Fund does not distribute by the end of any calendar year at least (1) 98% of the sum of its net investment income for that year and 98.2% of its capital gains (both long-term and short-term) for its fiscal year and (2) certain undistributed amounts from previous years. The Fund is subject to a payment of an estimated $63,000 of federal excise taxes attributed to calendar year 2015. The Fund paid $27,763 of federal excise taxes attributable to calendar year 2014 in March 2015.

3. Derivative Instruments

The Fund intends to use derivatives primarily to economically hedge against risks in the portfolio, namely interest rate risk and credit risk. The Fund may use options on Treasury futures contracts for the purpose of economically hedging against a significant increase in long-term interest rates. If the strategy is employed, the Fund would purchase put options on Treasury futures contracts that would increase in value if long-term interest rates increased significantly, offsetting some of the related decline in portfolio asset values. The Fund may also purchase and write call options on Treasury futures contracts to supplement the put option strategy and also to reduce the overall cost of the interest rate hedge (by earning premiums from the net sale of call options).

The Fund has the authority to use other derivatives for hedging or to increase expected return, but has not employed any of these derivatives to-date and does not anticipate broad use of these derivatives in the near future (although this may change without advance notice). Other approved derivatives strategies include: buying and selling credit default swaps, interest rate swaps and options thereon (swaptions), and options on securities. Accounting policies for specific derivatives, including the location of these items in the financial statements, are included in Note 2 as appropriate. No assurance can be given that such use of derivatives will achieve their desired purposes or, in the case of hedging, will result in an overall reduction of risk to the Fund.

The Fund did not use any derivatives during the fiscal years ended November 30, 2015 and November 30, 2014.

Options on Financial Futures Contracts: When an interest rate hedging strategy is employed, the Fund intends to use options on financial futures contracts in much the same way as described above. The risk associated with purchasing options, and therefore the maximum loss the Fund would incur, is limited to the purchase price originally paid. The risk in writing a call option is that the Fund may forego the opportunity for profit if the market price of the underlying security increases and the option is exercised. The risk in writing a put option is that the Fund may incur a loss if the market price of the underlying security decreases and the option is exercised.

4. Investment Advisory Fee, Servicing Agent Fee, Administration Fee, Transfer Agent Fee, Custodian Fee, Directors' Fees and Chief Compliance Officer Fee

Flaherty & Crumrine Incorporated (the "Adviser") serves as the Fund's investment adviser. The Fund pays the Adviser a monthly fee at an annual rate of 0.575% of the Fund's average daily managed assets up to $200 million and 0.50% of the Fund's average daily managed assets of $200 million or more. For purposes of calculating such a fee "managed assets" means the Fund's net assets, plus the principal amount of loans from financial institutions or debt securities issued by the Fund, the liquidation preference of preferred stock issued by the Fund, if any, and the proceeds of any reverse repurchase agreements entered into by the Fund.

Destra Capital Investments LLC (the "Servicing Agent") serves as the Fund's shareholder servicing agent. As compensation for its services, the Fund pays the Servicing Agent a fee computed and paid monthly at the annual rate of 0.12% of the Fund's Average Net Assets through the first year of the Fund's agreement with the Servicing Agent and 0.10% of the Fund's Average Net Assets for the remainder of the term of the agreement. For these purposes, "Average Net Assets" are the average daily net assets available to the Fund's common shareholders.

BNY Mellon Investment Servicing (US) Inc. ("BNY Mellon") serves as the Fund's administrator (the "Administrator"). As Administrator, BNY Mellon calculates the net asset value of the Fund's shares attributable to Common Stock and generally assists in all aspects of the Fund's administration and operation. As compensation for BNY Mellon's services as Administrator, the Fund pays BNY Mellon a monthly fee at an annual rate of 0.10% of the first $200 million of the Fund's average daily total managed assets, 0.04% of the next $300 million of the Fund's average daily total managed assets, 0.03% of the next $500 million of the Fund's average daily total managed assets and 0.02% of the Fund's average daily total managed assets above $1 billion. For purposes of calculating such fee, the Fund's total managed assets means the total assets of the Fund (including any assets attributable to the Fund's preferred stock that may be outstanding or otherwise attributable to the use of leverage) minus the sum of accrued liabilities (other than debt, if any, representing financial leverage).

BNY Mellon (c/o, Computershare) also serves as the Fund's Common Stock dividend-paying agent and registrar (the "Transfer Agent"). As compensation for BNY Mellon's services as Transfer Agent, the Fund pays BNY Mellon a monthly fee in the amount of $1,500, plus certain out of pocket expenses.

The Bank of New York Mellon (the "Custodian") serves as the Fund's Custodian. As compensation for the Custodian's services as custodian, the Fund pays the Custodian a monthly fee at the annual rate of 0.01% of the first $200 million of the Fund's average daily total managed assets, 0.008% of the next $300 million of the Fund's average daily total managed assets, 0.006% of the next $500 million of the Fund's average daily total managed assets, and 0.005% of the Fund's average daily total managed assets above $1 billion. For purposes of calculating such fee, the Fund's total managed assets means the total assets of the Fund (including any assets attributable to any Fund auction rate preferred stock that may be outstanding or otherwise attributable to the use of leverage) minus the sum of accrued liabilities (other than debt, if any, representing financial leverage).

The Fund pays each Director who is not a director, officer or employee of the Adviser a fee of $9,000 per annum, plus $750 for each in-person meeting of the Board of Directors or Audit Committee, $500 for each in-person meeting of the Nominating Committee attended, and $250 for each telephone meeting attended. The Audit Committee Chairman receives an additional annual fee of $3,000. The Fund also reimburses all Directors for travel and out-of-pocket expenses incurred in connection with such meetings.

The Fund pays the Adviser a fee of $35,000 per annum for Chief Compliance Officer services and reimburses out-of-pocket expenses incurred in connection with providing services in this role.

5. Purchases and Sales of Securities

For the year ended November 30, 2015, the cost of purchases and proceeds from sales of securities, excluding short-term investments, aggregated $120,519,609 and $113,177,873, respectively.

At November 30, 2015, the aggregate cost of securities for federal income tax purposes was $692,859,595, the aggregate gross unrealized appreciation for all securities in which there was an excess of value over tax cost was $29,613,071 and the aggregate gross unrealized depreciation for all securities in which there was an excess of tax cost over value was $19,673,170.

6. Common Stock

At November 30, 2015, 240,000,000 shares of $0.01 par value Common Stock were authorized.

7. Preferred Stock

The Fund has the authority to issue 10,000,000 shares of $0.01 par value preferred stock. The Fund does not currently have any issued and outstanding shares of preferred stock.

8. Committed Financing Agreement

The Fund has entered into a committed financing agreement ("Financing Agreement") with BNP Paribas Prime Brokerage International, Ltd. that allows the Fund to borrow on a secured basis, which the Fund uses in the normal course of business as financial leverage. Such leveraging tends to magnify both the risks and opportunities to Shareholders. As of November 30, 2015, the committed amount, and amount borrowed, under the Financing Agreement was $241.3 million.

The lender charges an annualized rate of 0.65% on the undrawn (committed) balance, and three-month LIBOR (reset quarterly) plus 0.75% on the drawn (borrowed) balance. Effective December 13, 2013, the Fund fixed the cost on $205 million of the leverage balance at a rate of 1.19% for a period of two years. The remaining leverage balance (and any increase in leverage balance) will continue to be at a variable rate. For the year ended November 30, 2015, the daily weighted average annualized interest rate on the drawn balance was 1.17% and the average daily loan balance was $238,995,890. LIBOR rates may vary in a manner unrelated to the income received on the Fund's assets, which could have either a beneficial or detrimental impact on net investment income and gains available to Shareholders.

The Fund is required to meet certain asset coverage requirements under the Financing Agreement and under the 1940 Act. In accordance with the asset coverage requirements, at least two-thirds of the Fund's assets are expected to be pledged as collateral assuming the full committed amount is drawn. Securities pledged as collateral are identified in the portfolio of investments. If the Fund fails to meet these requirements, or maintain other financial covenants required under the Financing Agreement, the Fund may be required to repay immediately, in part or in full, the amount borrowed under the Financing Agreement. Additionally, failure to meet the foregoing requirements or covenants could restrict the Fund's ability to pay dividends to Shareholders and could necessitate sales of portfolio securities at inopportune times. The Financing Agreement has no stated maturity, but may be terminated by either party without cause with six months' advance notice.

Under the terms of the Financing Agreement, the lender has the ability to borrow a portion of the securities pledged as collateral against the loan ("Rehypothecated Securities"), subject to certain limits. In connection with any Rehypothecated Securities, the Fund receives a fee from the lender equal to the greater of (x) 0.05% of the value of the Rehypothecated Securities and (y) 70% of the net securities lending income. The Fund may recall any Rehypothecated Security at any time and the lender is required to return the security in a timely fashion. In the event the lender does not return the security, the Fund will have the right to, among other things, apply and set off an amount equal to 100% of the then-current fair market value of such Rehypothecated Securities against any loan amounts owed to the lender under the Financing Agreement. Rehypothecated Securities are marked-to-market daily and adjusted as necessary so the value of all Rehypothecated Securities does not exceed 100% of the loan amount under the Financing Agreement. The Fund will continue to earn and receive all dividends, interest, and other distributions on Rehypothecated Securities. Rehypothecated Securities are identified in the Portfolio of Investments, and fees earned from rehypothecation are included in the Statement of Operations.

9. Portfolio Investments, Concentration and Investment Quality

Under normal market conditions, the Fund invests at least 80% of its "managed assets" in a portfolio of preferred and other income-producing securities issued by U.S. and non-U.S. companies, including traditional preferred stock, hybrid and trust preferred securities that have characteristics of both equity and debt securities, convertible securities, subordinated debt, and senior debt. "Managed assets" means the Fund's net assets, plus the principal amount of loans from financial institutions or debt securities issued by the Fund, the liquidation preference of preferred stock issued by the Fund, if any, and the proceeds of any reverse repurchase agreements entered into by the Fund. Also, under normal market conditions, the Fund will invest more than 25% of its total assets in the financials sector, which for this purpose is comprised of the bank, thrifts and mortgage finance, diversified financial services, finance, consumer finance, capital markets, asset management and custody, investment banking and brokerage, insurance, insurance brokerage, and real estate investment trust ("REIT") industries. From time to time, the Fund may have 25% or more of its total assets invested in any one of these industries. The Fund's portfolio may therefore be subject to greater risk and market fluctuation than a portfolio of securities representing a broader range of investment alternatives.

The Fund will invest at least 80% of its managed assets in (a) investment grade quality securities or (b) below investment grade quality securities of companies with investment grade senior unsecured debt outstanding, in either case determined at the time of purchase. Consequently, the Fund may invest up to 20% of its managed assets in securities of companies with below investment grade quality senior unsecured debt outstanding. In addition, the Fund may invest in unrated securities that the Fund's investment adviser deems to be comparable in quality to rated issues in which the Fund is authorized to invest.

The Fund may invest up to 15% of its managed assets in common stocks, and up to 100% of its managed assets in securities of non-U.S. companies. Investments may include U.S. dollar-denominated securities and non-U.S. dollar-denominated securities issued by companies organized or headquartered in foreign countries and/or doing significant business outside the United States.

The Fund may employ certain investment techniques in accordance with its fundamental investment policies. These may include the use of when-issued and delayed delivery transactions. Securities purchased or sold on a when-issued or delayed delivery basis may be settled within 45 days after the date of the transaction. The Fund may also enter into transactions, in accordance with its investment policies, involving short sales of securities and purchases of securities on margin. Such transactions may expose the Fund to credit and market valuation risk greater than that associated with regular trade settlement procedures.

10. Subsequent Events

Management has evaluated the impact of all subsequent events on the Fund through the date the financial statements were issued, and has determined that there were no subsequent events requiring recognition or disclosure in the financial statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Shareholders and Board of Directors of
Flaherty & Crumrine Dynamic Preferred and Income Fund Incorporated

We have audited the accompanying statement of assets and liabilities of Flaherty & Crumrine Dynamic Preferred and Income Fund Incorporated, including the portfolio of investments, as of November 30, 2015, and the related statement of operations and cash flows for the year then ended, the statements of changes in net assets available to common stock for each of the years in the two-year period then ended, and the financial highlights for the each of the years in the two-year period ended November 30, 2015 and for the period from May 29, 2013 (commencement of operations) to November 30, 2013. These financial statements and financial highlights are the responsibility of the Fund's management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. Our procedures included confirmation of securities owned as of November 30, 2015, by correspondence with the custodian, transfer agent or by other procedures. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements and financial highlights referred to above present fairly, in all material respects, the financial position of Flaherty & Crumrine Dynamic Preferred and Income Fund Incorporated as of November 30, 2015, the results of its operations and its cash flows for the year then ended, the changes in its net assets available to common stock for each of the years in the two-year period then ended, and the financial highlights for each of the years or periods described above, in conformity with U.S. generally accepted accounting principles.

KPMG LLP

Boston, Massachusetts
January 21, 2016

Dividend Reinvestment and Cash Purchase Plan

Under the Fund's Dividend Reinvestment and Cash Purchase Plan (the "Plan"), a shareholder whose Common Stock is registered in his or her own name will have all distributions reinvested automatically by BNY Mellon as agent under the Plan, unless the shareholder elects to receive cash. Registered shareholders may elect to receive cash by contacting BNY Mellon at the number provided below. If shares are registered in the name of a broker-dealer or other nominee (that is, in "street name") and the broker or nominee participates in the Plan, distributions may be reinvested by the broker or nominee in additional shares under the Plan, unless the shareholder elects to receive distributions in cash. Shareholders may elect to receive cash by contacting their broker or nominee. A shareholder who holds Common Stock registered in the name of a broker or other nominee may not be able to transfer the Common Stock to another broker or nominee and continue to participate in the Plan. Investors who own Common Stock registered in street name should consult their broker or nominee for details regarding reinvestment.

The number of shares of Common Stock distributed to participants in the Plan in lieu of a cash dividend is determined in the following manner. Whenever the market price per share of the Fund's Common Stock is equal to or exceeds the net asset value per share on the valuation date, participants in the Plan will be issued new shares valued at the higher of net asset value or 95% of the then current market value. Otherwise, BNY Mellon will buy shares of the Fund's Common Stock in the open market, on the New York Stock Exchange or elsewhere, on or shortly after the payment date of the dividend or distribution and continuing until the ex-dividend date of the Fund's next distribution to holders of the Common Stock or until it has expended for such purchases all of the cash that would otherwise be payable to the participants. The number of purchased shares that will then be credited to the participants' accounts will be based on the average per share purchase price of the shares so purchased, including brokerage commissions. If BNY Mellon commences purchases in the open market and the then current market price of the shares (plus any estimated brokerage commissions) subsequently exceeds their net asset value most recently determined before the completion of the purchases, BNY Mellon will attempt to terminate purchases in the open market and cause the Fund to issue the remaining dividend or distribution in shares. In this case, the number of shares received by the participant will be based on the weighted average of prices paid for shares purchased in the open market and the price at which the Fund issues the remaining shares. These remaining shares will be issued by the Fund at the higher of net asset value or 95% of the then current market value.

Plan participants are not subject to any charge for reinvesting dividends or capital gains distributions. Each Plan participant will, however, bear a proportionate share of brokerage commissions incurred with respect to BNY Mellon's open market purchases in connection with the reinvestment of dividends or capital gains distributions. For the year ended November 30, 2015, $372 in brokerage commissions were incurred.

The automatic reinvestment of dividends and capital gains distributions will not relieve Plan participants of any income tax that may be payable on the dividends or capital gains distributions. A participant in the Plan will be treated for Federal income tax purposes as having received, on the dividend payment date, a dividend or distribution in an amount equal to the cash that the participant could have received instead of shares.

ADDITIONAL INFORMATION (Unaudited) (Continued)

In addition to acquiring shares of Common Stock through the reinvestment of cash dividends and distributions, a shareholder may invest any further amounts from $100 to $3,000 semi-annually at the then current market price in shares purchased through the Plan. Such semi-annual investments are subject to any brokerage commission charges incurred by BNY Mellon under the Plan.

A shareholder whose Common Stock is registered in his or her own name may terminate participation in the Plan at any time by notifying BNY Mellon in writing, by completing the form on the back of the Plan account statement and forwarding it to BNY Mellon, or by calling BNY Mellon, directly. A termination will be effective immediately if notice is received by BNY Mellon not less than 10 days before any dividend or distribution record date. Otherwise, the termination will be effective, and only with respect to any subsequent dividends or distributions, on the first day after the dividend or distribution has been credited to the participant's account in additional shares of the Fund. Upon termination and according to a participant's instructions, BNY Mellon will either (a) issue certificates for the whole shares credited to the shareholder's Plan account and a check representing any fractional shares or (b) sell the shares in the market. Shareholders who hold Common Stock registered in the name of a broker or other nominee should consult their broker or nominee to terminate participation.

The Plan is described in more detail in the Fund's Plan brochure. Information concerning the Plan may be obtained from BNY Mellon at 1-866-351-7446.

Proxy Voting Policies and Proxy Voting Record on Form N-PX

The Fund files Form N-PX with its complete proxy voting record for the twelve months ended June 30th no later than August 31st of each year. The Fund filed its latest Form N-PX with the Securities and Exchange Commission ("SEC") on August 12, 2015. This filing, as well as the Fund's proxy voting policies and procedures, are available (i) without charge, upon request, by calling the Fund's Transfer Agent at 1-866-351-7446 and (ii) on the SEC's website at www.sec.gov. In addition, the Fund's proxy voting policies and procedures are available on the Fund's website at www.preferredincome.com.

Portfolio Schedule on Form N-Q

The Fund files a complete schedule of portfolio holdings with the SEC for the first and third fiscal quarters on Form N-Q, the latest of which was filed for the quarter ended August 31, 2015. The Fund's Form N-Q is available on the SEC's website at www.sec.gov or may be viewed and obtained from the SEC's Public Reference Room in Washington D.C. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

Supplementary Tax Information

Distributions to Common Stock Shareholders are characterized as follows for purposes of federal income taxes (as a percentage of total distributions). Individual Shareholders will receive a Form 1099-DIV in 2016 with information about the tax character of distributions they received in calendar year 2015.

	Individual Shareholder		Corporate Shareholder	
	QDI	Ordinary Income	DRD	Ordinary Income
Fiscal Year 2015	76.31%	23.69%	39.68%	60.32%
Calendar Year 2015	77.28%	22.72%	40.36%	59.64%
